

SHARING LAUNDRY FACILITIES

Current research suggests that COVID-19 can live for hours to days on hard surfaces, so laundry machines, countertops, and furniture need to be sanitized frequently.

Although laundry from sick people should be kept bagged and separate while in your home to prevent accidental handling, there is no need to wash or dry these items separately.

DO'S

- ✓ Wash your hands before and after.
- ✓ Wipe down controls and handles before and after use.
- ✓ Dry items at the highest temperature possible and dry them completely.
- ✓ Wash with soap and the warmest water possible; do not overload the machine.
- ✓ Keep a 2 metre distance from others.
- ✓ Disinfect your hamper before filling it with clean clothes.

DON'TS

- ✗ Overload the machine.
- ✗ Shake dirty laundry before putting it in the machine.
- ✗ Leave soiled clothing or baskets on top of machines or tables.
- ✗ Leave cleaning residues (like bleach) that could damage other people's clothing.
- ✗ Leave dryer door open when not in use.
- ✗ Forget to wash your hands.
